

Collider AI — Product Requirements Document (PRD)

Owner: David Ebri · Bundle ID: com.collider.ai · One master table: goal, principles, and line-by-line requirements

Section	ID	Item	Detail	Priority	Principle	Acceptance Criteria
Meta	M-01	Product	Collider AI — mobile multi-model AI app	—	—	One prompt fans out to many AI models; Collide merges them into one verdict.
Meta	M-02	Owner	David Ebri	—	—	Sole product owner and decision-maker.
Meta	M-03	Bundle ID	com.collider.ai	Must	—	iOS bundleIdentifier == Android package == backend APPLE_BUNDLE_IDS, all equal com.collider.ai.
Meta	M-04	Platforms	iOS + Android (Expo SDK 54, EAS builds)	Must	—	Runs in Expo Go SDK 54; production builds via EAS only.
Meta	M-05	Backend	Base44 chatProxy + socialAuth functions	Must	—	All model routing via https://superagent-91f78109.base44.app/functions/chatProxy .
Goal	G-01	Mission	Set the standard for multi-model AI: trustworthy answers + calm, crafted feel.	—	—	Product reads as intentional and premium, never an amateur app.
Goal	G-02	Core value	Stop asking one AI and hoping — ask every model, get one verdict.	—	—	Collide synthesis is the lead differentiator in store + onboarding.
Goal	G-03	Lane	Synthesis (consensus/divergence), not just aggregation.	—	—	Collide produces a single verdict noting agreement and disagreement.
Principle	P1	Lower the stakes	Serene, private, reversible, optional-feeling. No audition/technical pressure.	Must	P1	No mic/record signals; separate calm space; reversible choices.
Principle	P2	Give it a name / character	A character invites exploration; a technical label gets skipped.	Must	P2	Voice feature is named 'Hermes', presented as a character, not 'Voice'.
Principle	P3	Give it purpose — it serves you	It exists FOR the user: responds, has presence, speaks back.	Must	P3	Hermes speaks (TTS); features respond to and serve the user.
Principle	P4	Recruit via meaningful customization	Engage with a creative, meaningful choice before the feature is needed.	Must	P4	Primary customization = which voice Hermes is; color is secondary only.
Functional	FR-01	Multi-model send	Send one prompt to multiple AI models simultaneously.	Must	P3	Single prompt fans out to all selected models; each card streams its own answer.
Functional	FR-02	Uniform grid	Uniform 1-4 column model grid, responsive.	Must	—	Grid renders 1-4 columns by width; equal-size cards; no layout jump on load.
Functional	FR-03	Feature parity	Global feature parity across all model cards.	Must	—	Every card supports copy/share/edit/regen/delete regardless of model.
Functional	FR-04	Collide synthesis	'Collide' synthesizes all answers into one verdict.	Must	P3	Tapping Collide returns one synthesis noting agreement & divergence.
Functional	FR-05	Free models + failover	Free tier: 6 models with automatic cross-provider failover.	Must	P3	Llama 3.3, Llama 4, Qwen3, GPT-OSS 120B, GLM 4.5 Air, Gemini Flash answer; 429s auto-reroute.
Functional	FR-06	Premium models	Pro tier: premium models unlocked.	Must	—	Claude Sonnet 4.5, GPT-4o, Gemini 2.5 Pro, Grok 3 unlocked for Pro; gated for free.
Functional	FR-07	Hermes read-aloud	Hermes reads any answer aloud in a chosen voice.	Must	P2,P3	Hermes speaks the answer in the selected voice; never silent (device-speech fallback).
Functional	FR-08	Hermes voices	Hermes — 6 selectable, human-named voices.	Must	P4	6 distinct voices selectable; choice persists across sessions.
Functional	FR-09	Hermes greeting	Hermes speaks a confirmation line when a voice is picked.	Must	P3,P4	On selecting a voice, Hermes greets the user in that voice immediately.
Functional	FR-10	Voice input	Speak your question (mic → transcription).	Must	P1	Mic capture → transcription → prompt populated; no typing required.
Functional	FR-11	Sign in with Apple	One-tap Apple SSO.	Must	P1	Apple SSO; token verified server-side; account created/linked.
Functional	FR-12	Sign in with Google	One-tap Google SSO.	Should	P1	Google SSO once client IDs configured; verified server-side.
Functional	FR-13	Guest mode	Continue as guest (no account).	Must	P1	User can use the app fully without signing in; server-sync skipped safely.

Section	ID	Item	Detail	Priority	Principle	Acceptance Criteria
Functional	FR-14	History sync	Conversation history, synced across devices.	Must	P3	Past conversations persist and reload per account; newest-first.
Functional	FR-15	Projects	Projects to organize conversations.	Should	—	Conversations group under named projects; deleting a project detaches convs.
Functional	FR-16	Memory	Persistent memory across conversations.	Should	P3	User facts saved server-side and applied to future prompts.
Functional	FR-17	Scheduled prompts	Scheduled prompts with push notifications.	Should	P3	Prompt runs on schedule (once/daily/weekly); result pushed to device.
Functional	FR-18	Scene themes	Scene 'places' backgrounds (16 themes) with ambient motion.	Must	P1,P4	User picks a living scene; gentle native-driven motion; choice persists.
Functional	FR-19	Wave color	Wave color customization (secondary).	Could	P4	Accent/wave color adjustable; persists. Never the only customization.
Functional	FR-20	Incognito	Private / Incognito mode.	Should	P1	A conversation can run without being saved to history.
Functional	FR-21	Image gen	Image generation (gated).	Could	—	Free: FLUX Schnell, SDXL. Pro: DALL·E 3, FLUX 1.1 Pro. Gated cleanly.
Functional	FR-22	Daily limit	Free-tier daily prompt limit, understated.	Must	—	15 prompts/day free; usage shown minimally (no loud count callouts).
Functional	FR-23	Subscription	Subscription purchase (Pro/Ultra) via IAP/Stripe.	Must	—	User can upgrade; tier reflected server-side; unlocks gated features.
Non-Functional	NFR-01	Motion standard	Every interactive element answers Entrance/State/Touch/Ambient.	Must	P1	Each tappable: animated entrance, distinct animated states, press-scale + haptic, ambient life on idle CTAs.
Non-Functional	NFR-02	Iconography	One iconography system (monochrome geometric glyphs).	Must	P1	No color emoji as UI icons; voice = waveform glyph, not a mic emoji.
Non-Functional	NFR-03	Haptics	Consistent haptics map across the whole app.	Must	P1	Light=selection, Medium=primary, Success/Error=outcomes. No primary action without haptic.
Non-Functional	NFR-04	No driver crash	No JS/Native driver crashes.	Must	—	Never animate color on a node with a native transform; zero white-screen on send.
Non-Functional	NFR-05	Calm motion	Ambient motion errs slow, never frantic.	Must	P1	Idle CTA breathe ~1800ms; too-fast is the only failure.
Non-Functional	NFR-06	Never mute	Hermes is never mute.	Must	P3	If backend TTS fails/throttles, device speech speaks; user always hears a voice.
Non-Functional	NFR-07	Persistence	Voice/scene/color choices persist across sessions.	Must	P4	All three reload identically after app restart.
Non-Functional	NFR-08	Failover	Backend reliability via multi-provider/multi-key failover.	Must	—	429/5xx auto-rotate across keys then providers; free models stay available.
Non-Functional	NFR-09	Pre-verified builds	Builds verified before delivery (no user testing).	Must	—	tsc clean + web export clean + changed flows exercised live before any handoff.
Non-Functional	NFR-10	SDK parity	SDK 54 / Expo Go parity on device.	Must	—	Runs in Expo Go SDK 54; production builds via EAS only.
Non-Functional	NFR-11	Visual fidelity	Visual fidelity matches original mockups.	Must	P1	Rendered output verified against mockups as the primary quality gate.
Non-Functional	NFR-12	Privacy	Audio not stored; SSO data used for auth only.	Must	P1	Voice audio transported, not persisted; email/name only for account.
Tier Matrix	T-01	Multi-model send	Guest Y · Free Y · Pro Y · Ultra Y	—	—	Available to all tiers.
Tier Matrix	T-02	Free models (6)	Guest Y · Free Y · Pro Y · Ultra Y	—	—	Available to all tiers.
Tier Matrix	T-03	Premium models	Guest - · Free - · Pro Y · Ultra Y	—	—	Claude/GPT-4o/Gemini Pro/Grok gated to Pro+.
Tier Matrix	T-04	Daily cap	Guest 15/day · Free 15/day · Pro Unlimited · Ultra Unlimited	—	—	Cap enforced server-side.
Tier Matrix	T-05	Hermes voice	Guest Y · Free Y · Pro Y · Ultra Y	—	—	Read-aloud, 6 voices, all tiers.
Tier Matrix	T-06	Voice input	Guest Y · Free Y · Pro Y · Ultra Y	—	—	All tiers.
Tier Matrix	T-07	History sync	Guest - (local) · Free Y · Pro Y · Ultra Y	—	—	Cross-device sync requires sign-in.
Tier Matrix	T-08	Projects/Memory/Scheduled	Guest - · Free Y · Pro Y · Ultra Y	—	—	Requires sign-in.
Tier Matrix	T-09	Image gen (free)	Guest Y · Free Y · Pro Y · Ultra Y	—	—	FLUX Schnell / SDXL.
Tier Matrix	T-10	Image gen (premium)	Guest - · Free - · Pro Y · Ultra Y	—	—	DALL·E 3 / FLUX 1.1 Pro.
Tier Matrix	T-11	Scenes & customization	Guest Y · Free Y · Pro Y · Ultra Y	—	—	All tiers.
Hermes Voices	V-01	Sol	Provider voice: Kore	—	P4	Warm, grounded.

Section	ID	Item	Detail	Priority	Principle	Acceptance Criteria
Hermes Voices	V-02	Vale	Provider voice: Aoede	—	P4	Bright, airy.
Hermes Voices	V-03	Echo	Provider voice: Puck	—	P4	Playful, light.
Hermes Voices	V-04	Sage	Provider voice: Charon	—	P4	Calm, deliberate.
Hermes Voices	V-05	Onyx	Provider voice: Fenrir	—	P4	Deep, steady.
Hermes Voices	V-06	Lumen	Provider voice: Leda	—	P4	Clear, gentle.
